

Want to innovate on your legacy product to get a competitive advantage

Ensure you make the right choices and define action plan

Search to implement connected scenario to bring added value

CONNECT ME

OUR SOLUTION

- Define **new connected** scenario
- Analyze **connectivity** capability of your current system
- Analyze relevant **software architecture**
- Provide **transparent and full information** to allow you make decisions

OUR 3 STEPS EXPERT APPROACH

1- Initial workshop

clarify the main features and constraints of your product

2- Add Witekio's expertise

identify relevant software architectures, hardware "compatibilities", analyze and compare software architecture scenarios, to provide you a transparent full report and give you the keys to make decisions

3- Final workshop

provide you with full visibility and clarifications on the outcome, and start forecasting next steps

YOUR OUTCOME

- 1- Potential technical software architecture and recommendations
- 2- Main stakes and risks identified
- 3- Macro planning and project sizing

YOUR BENEFITS

Full understanding on how to **get your device connected**
Secured project timing, technologies, and costs

Take advantage of an experienced team to get your product connected,

15

years experience in embedded and IoT software design, architecture, development and integration

90+

engineers

Coders, challengers, designers, developers, architects focused on our customers, happy to bend over backwards for them.

300

Projects/year, in a very broad range of technologies (embedded firmware and application, OS, mobile application, Cloud systems)

Some of our customer projects

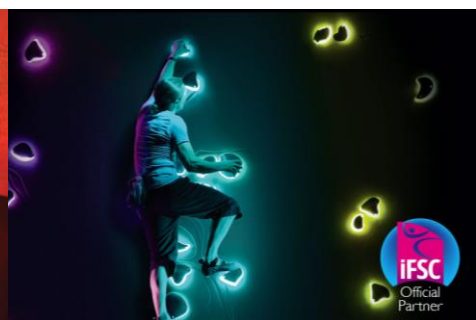

N&W

Connected coffee vending machine

Tao Light

Smart LED bulbs

LUXOV

Connected climbing wall
