Facing software industrialization **?**

Software builds consistency on all your devices **?**

Challenges in change and **maintenance** processes **?**

SOFTWARE FACTORY

OUR SOLUTION

Assess your **existing processes** and tools
Define tools and **methodologies** to **strengthen** your SW solution
Provide first level of **short term** actions

OUR EXPERT APPROACH

1- Initial workshop
in order to assess the existing processes tools and SW environment

2- Leveraging the Witekio team knowledge and experience
to find out possible organizations that can match the requirements and is strong enough without being overkill and to compare most relevant approaches

3- Final workshop
to provide full visibility and clarifications on the outcome, and start forecasting next steps

YOUR OUTCOME

1- List of **good** and pain points
2- Possible **improvements**, with associated **risks**
3- Macro **planning** and project sizing

YOUR BENEFITS

External view on software development processes and maturity
Build a **plan** to have level up software **robustness**

An expert team to level up your software towards an industrial grade,

15
years experience in embedded and IoT software design, architecture, development and integration

300
Projects/year, in a very broad range of technologies (embedded firmware and application, OS, mobile application, Cloud systems)

90+ engineers
Coders, challengers, designers, developers, architects focused on customers, happy to bend over backwards for them.

Some of our customer projects

N&W
Connected coffee vending machine

IBUBBLE
Underwater drone

LEICA GEOSYSTEMS
Survey equipment
